

# E-mediavision.com unveils graphics range

by Carolyn Giardina

E-mediavision.com has a selection of graphic systems for sports, news, weather, and other media markets on hand at IBC.

Among these will be version 3.0 of its Point-HD, a dual format HD/SD realtime broadcast graphics tool with a realtime zoom function that allows any part of a HD video image to be 'zoomed' up whilst maintaining definition and clarity. V3.0 will also feature a new 3D graphics engine that

allows 3D animated objects to be placed and moved over live video.

Also on the stand is X-View, a CV and SD range of multiviewers. Mouse control on the CV range enables any picture window to be positioned, scaled or zoomed in realtime. X-View SD will include a new X-View scaling engine, designed to provide high definition and clarity of displayed images together with an enhanced set of signal monitoring alarms.
